Aciclovir (ACV), also known as acyclovir, is an antiviral medication. It is primarily used for the treatment of herpes simplex virus infections, chickenpox, and shingles. Other uses include prevention of cytomegalovirus infections following transplant and severe complications of Epstein-Barr virus infection. It can be taken by mouth, applied as a cream, or injected. Clever experimentation can yield insights into the animal's experience (e.g. self-administration of analgesia, Danbury et al., 1997; selective attention, Ashley et al., 2009, Sneddon et al., 2003a; paying a cost to access analgesia). Examples of potentially painful events leading to motivational changes suggest the potential for a negative affective state associated with injury. Emergency medical personnel in the United Kingdom are people engaged in the provision of emergency medical services and this includes paramedics, emergency medical technicians and emergency care assistants. 'Paramedic' is a protected title, strictly regulated by the Health and Care Professions Council, although there is tendency for the public to use this term when referring to any member of ...
